Christopher Yahir Moreno Moreno

Backend Developer & AI Engineer • Cloud-Native Architecture (AWS)

Monterrey, Nuevo León, Mexico | +52 992 104 0022 | christopheryahirm@gmail.com

GitHub | LinkedIn | YouTube | Portfolio

SUMMARY

Software Engineer specializing in backend development, distributed systems, and cloud-native architecture. Experienced in designing and delivering production systems using Java, Python and modern cloud technologies. Strong background in API design, distributed workflows, microservices, real-time systems, and CI/CD, with growing specialization in AWS and AI engineering. Technical lead experienced in driving architecture decisions, coordinating development teams, and translating complex technical requirements into scalable solutions.

TECHNICAL SKILLS

Languages: Python, JavaScript/TypeScript (Node.js), Java, Go, Bash

Backend: Django, FastAPI, Flask, Spring Boot, Spring Cloud, Spring Security, Spring MVC/WebSocket, JPA/Hibernate

Architecture: Clean & Hexagonal Architecture, Domain-Driven Design, Microservices, SAGA Pattern, Kafka, RabbitMQ

Databases: PostgreSQL, MySQL, MongoDB, Redis, SQLite

AI & Automation: RAG, LangChain, ChromaDB, OpenAI Embeddings, AI Agents, MCP

AWS: EC2, ECS/EKS, RDS/Aurora, S3, Lambda, Cognito, IAM, Security Groups, CloudWatch, API Gateway, Bedrock

DevOps & IaC: Docker, Kubernetes, Terraform, AWS CDK, GitHub Actions (CI/CD), Linux

PROFESSIONAL EXPERIENCE

Software Engineer AWS *Mar 2026 – Present*

SOFTWARE BANK

- Defined architecture, database design, and code standards, spearheading AI service integrations, ERP implementations, and production-ready AWS deployments.
- Concurrency-safe logic: database-level budget holds, pessimistic transactions with **MySQL** advisory locks and deadlock retries
- Integrated ERPNext/Frappe with error handling and compensation; automated CFDI invoice extraction (XML parsing, Tesseract OCR fallback) and multi-currency SQL reporting
- Secured the APIs with JWT + scrypt, rate limiting, dynamic RBAC guards, and Amazon **Cognito**
- Built a **RAG** chatbot over client databases and Excel files (LangChain, OpenAI embeddings, ChromaDB/FAISS, pandas, openpyxl) and integrated AI services for PDF analysis, TTS, and transcription
- Deployed on **AWS**: EC2 + RDS (PostgreSQL) for the budget system and ECS (Docker) for the WMS, with CloudWatch logging/monitoring and IAM/Security Groups

Python Backend Engineer *Jan 2025 – Jan 2026*

Cloudteen.io

- Designed the hexagonal (Clean) architecture of a FastAPI backend on MongoDB, with aggregation pipelines, and maintained it
- Built REST APIs applying the SAGA pattern for distributed workflows
- Built a Django CRM from client-provided templates, with authentication, role management, and CI/CD with GitHub Actions
- Applied modern Python practices: SQLModel ORM, strict typing, async-first architecture, MySQL, and Redis caching
- Collaborated with the backend team in an agile SCRUM workflow, using Slack for communication and Jira for task assignment

EARLIER EXPERIENCE

IMA Chiapas — Systems Administrator / Backend Contributor — administered AWS infrastructure (RDS/MySQL), designed database migrations, and contributed to backend services in Go *Nov 2023 – Aug 2024*

SELECTED PROJECTS

Event Logging System — Sentry-inspired observability platform: Go/chi backend on PostgreSQL with layered architecture and a real-time WebSocket dashboard; ECS Fargate to support persistent WebSocket connections; CI/CD to AWS.

CADOFI — Financial Management System — Spring Boot + React/TypeScript application with role-based access control, debt tracking, and reporting dashboards; containerized and orchestrated on Kubernetes (DigitalOcean).

MedMonitor — Medical Telemonitoring Platform — Go + SQLite backend with encrypted data flows and a React dashboard for chronic-disease tracking; CI/CD deployment on AWS.

EDUCATION

B.Eng. in Software Engineering *Aug 2022 – Dec 2025*

Universidad Politécnica de Chiapas

AWS Academy: Cloud Architecting, Cloud Foundations, Cloud Security · Networking & Systems Administration Fundamentals
